Slot: B

Course Name: Software Engineering

Course Faculty: Dr Latha

Project Title: MediGuard AI: An Intelligent Digital Prescription and Medication Adherence Management System

Module PhotoGraphs :

Project Description: Module 1- Intelligent Digital Prescription Management

It is designed to provide a centralized and organized digital solution for managing prescription information. The module replaces traditional paper-based prescription handling with a structured digital process for **creating, storing, organizing, retrieving, and viewing prescription records**.

The system helps reduce common problems associated with paper prescriptions, such as **loss, damage, difficult retrieval, and misinterpretation**. It provides a clear and accessible way to maintain prescription details while considering important requirements such as **data accuracy, reliability, usability, security, and controlled access**.

The module serves as the core prescription-management component of MediGuard AI and aims to make prescription handling more **efficient, reliable, and convenient** for authorized healthcare users.
